Page 201, line 6, for oblique read certain oblique;
line 7, for anti-symmetric read symmetric.
Page 202, lines 26, 27, for anti-symmetric read symmetric.
Page 204, equation (17), for \( \dot{w}' \) read \( w' \);
line 9, for \( \partial u/\partial z_1 = \partial w/\partial x_1 \) read \( \partial u/\partial z_1 = \partial w/\partial x_1 \);
equation (19), for \( \xi_1 \) read \( R\xi_1 \).
Page 205, line 14, for \( \partial w/\partial y \) read \( \partial u/\partial y \)
line 16, for \( \text{(ii)} \) read \( \text{(iii)} \);
line 16, 17, for respectively anti-symmetric and symmetric
read anti-symmetric;
line 17, for \( \text{(iii)} \) read \( \text{(ii)} \);
line 18, for respectively anti-symmetric and symmetric
read symmetric;
line 40, for \( \chi = \frac{1}{2}(\bar{v}(\infty) - (\bar{v}^2(\infty) + 4(\lambda^2 + iR(\alpha + \beta\bar{w}(\alpha/R)))^{\frac{1}{2}})
read \chi = \frac{1}{2}(\bar{v}(\infty) - (\bar{v}^2(\infty) + 4(\lambda^2 + iR(\alpha + \beta\bar{w}(\alpha/R)/R - \alpha\epsilon)))^{\frac{1}{2}}).
Page 209, line 15, for oblique read certain oblique;
line 15, 16, for anti-symmetric read symmetric.

Note that, corresponding to the cases (i)–(iv), the boundary conditions applicable in the blending region on \( \nu_1 = 0 \) for large \( \nu_1 \) are: (i) \((D + i\beta)(D - i\beta)v = 0\); (ii) \((D - i\beta)(D + i\beta)v = 0\); (iii) \((D + i\beta)v = 0\); and (iv) \((D - i\beta)v = 0\). Further, the anti-symmetric mode corresponding to condition (iv) with a negative value of \( \beta \) has similar stability characteristics to those reported for the symmetric mode corresponding to condition (iii), except that it is more stable; for example, at \( z_0 = 6 \) it implies a critical Reynolds number of \( \text{ca.} 76 \) for the anti-symmetric mode compared with 54 for the symmetric mode.

**Incremental constitutive relations for granular materials based on micromechanics**

**By M. M. Mehra Badi, B. Loret and S. Nemat-Nasser**

Figures 6 and 10 in this paper were originally printed with an incorrect layout. They are printed below, with their correct layout, complete with captions, which remain unchanged.

Figure 6. Distribution of magnitudes of contact forces and the directional distribution of the ratio of shear to normal forces at various increments marked on the stress-strain curve of figure 1. Increments for $M f / p$: (a) (i) 00; (ii) 05; (iii) 20; (b) (i) 30; (ii) 40; (iii) 40. Increments for $-f^{(a)}/\mu f^{(m)}$: (a) (iv) 00; (v) 05; (vi) 20; (b) (iv) 30; (v) 40; (vi) 50.

Figure 10. Distribution of magnitudes of contact forces and the directional distribution of the ratio of shear to normal forces at various increments marked on the stress–strain curve of figure 7. Increments for $M_1f/p$: (a) (i) 00; (ii) 05; (iii) 25; (b) (i) 39; (ii) 50; (iii) 75. Increments for $-f^{(o)}/\mu f^{(m)}$: (a) (iv) 00; (v) 05; (vi) 25; (b) (iv) 39; (v) 50; (vi) 75.
